The Spartan Tool Cable Safety Guide has been designed to improve the operational safety. Its purpose is to prevent direct contact with the rotating cable. To install, place the spring end of the Cable Safety Guide against the hub of the power feed and rotate it counterclockwise under pressure until the spring rests against the wall of the Actuator Assembly.

Figure 1 illustrates the proper positioning and appropriate safety gear when using the machine and Cable Safety Guide:

![Figure 1](image)

**WARNING**

Read the appropriate "Operating & Safety Instructions" before operating any Spartan Tool machine. Sewer cleaning can be dangerous if precautions are not taken and rules are not followed.

Before using the machine, make sure the operator's switch is in the "forward" position. [The drum will rotate clockwise when standing behind the machine.]

**WARNING**

If the operator's switch is in the "Reverse" position, the power feed will operate counter to the labeling on the power feed - "Reverse" will move the cable forward and "Forward will retrieve the cable.
The length of the Cable Safety Guide is the correct distance the machine should be located from the pipe opening. If the machine cannot be located as prescribed, precautions must be taken. A pipe section must be placed in the area between the "cleanout entry" and the end of the Cable Safety Guide to avoid injury.

**WARNING**

⚠️ A distance exceeding of 3' between the machine and the pipe opening may cause personal injury from a rotating, swinging cable, if precautions are not taken. ⚠️

If a "cleanout" is positioned on a wall, then the machine should have support legs, found in the tool box, positioned as in Figure 2. Ensure the appropriate pipe section is placed between the Cable Safety Guide and the Cleanout Entry to avoid injury.

**WARNING**

⚠️ Make sure to keep downward pressure on the Cable Safety Guide to keep slack from developing on the cable to prevent looping. ⚠️
