

SPARTAN
SINCE 1943

WATER LINE SLITTER

Don't make a mess of your customers' lawns.

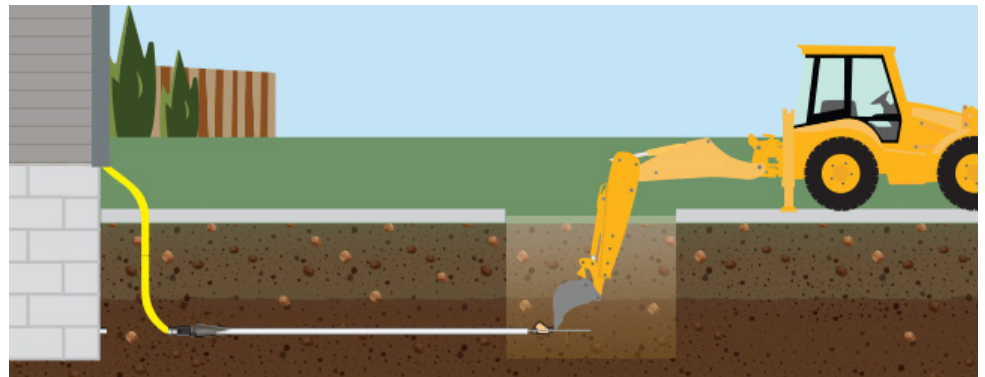

A Spartan Tool Water Line Slitter allows you to replace existing water services without trenching up a customer's lawn. You use the same excavation equipment you currently have and simply slide a cable through the existing water pipe, attach the cable clamp and start pulling. You can replace or even upsize any 1/2" to 1 1/4" water line up to 200' long in a matter of minutes using copper, poly or PVC. Your customer will be thrilled, you'll be onto the next job before you know it, and you can retire your trencher. A small investment with Spartan will pay you dividends for years.

SPECS

- Pipe sizes: 1/2" to 1 1/4"
- Lengths available: 75', 100', 150', and 200'
- Replaces lines of any material
- Replace with new lines in copper, poly, or PVC

FEATURES
